

## How do I use a Global Custom Widget?

Zach W. - 2021-02-08 - [Website Widgets](#)

You use widgets to add content (such as stories, links and upcoming events) to your bulletin or web page. They are essential design features, and each one has a different function. In this article we'll take a closer look at **Global Custom Widgets**. Global Custom Widgets are custom widgets that can be used on more than one page or bulletin. There are two different kinds of Global Custom Widgets: Website Global Custom Widgets and Bulletin Global Custom Widgets. The Website Global Custom Widget can only be used on the website and custom pages. The Bulletin Global Custom Widget can be used on any bulletin. These widgets can be very helpful when wanting to add the same information in more than one place.

1. To access any widget, you need to be logged into your webpage. Then, access the relevant content editor, either for your website or bulletin.
2. Once you have accessed your appropriate content editor, you can choose to select a new **Global** or **Page Specific** widget. In this instance we'll look at the creation of a **Global Custom** widget. You can create these by clicking on the orange **Custom Widgets (Global)** tab.

3. You should see the first Widget in the group, the **Global Custom Widget**. Left click and drag the widget to the desired frame.

6. When you go back to the Home Page content designer and you click on the Custom Widgets (Global) tab you will see your custom widget added to the list. That custom widget can now be used throughout the site without having to recreate it again.

## Properties

Each widget has a function that permits you to edit the widget properties.

1. To access the widget properties, hover your mouse over the widget once it is in place. Click on the **Gear** icon when it appears.

2. You may now edit categories under the various headings. Under the **General** category you can edit spacing and border properties for the widget's border.
  - **Show Border:** Click this check box if you wish to display a border around the widget.
  - **Padding Left:** Enter a value in pixels to set a space to the left of the widget.
  - **Padding Right:** Enter a value in pixels to set a space to the right of the widget.
  - **Padding Top:** Enter a value in pixels to set a space above the widget.
  - **Padding Bottom:** Enter a value in pixels to set a space below the widget.
  - **Border Style:** Use this drop-down menu to choose a border style.
  - **Border Thickness:** Enter a number to change the border setting. Leave blank to set the default.
  - **Border Colour:** Click on the colour choice window to set a border colour.

3. In the section marked **Header Properties** you may customize the appearance of the widget title.

- **Title:** Use this field to enter a new title for the header. This will not change the title of the widget, but rather the heading under which the widget is displayed. You may edit the style and appearance of the text with the format options link to the right of the title field.
- **Show Title:** Uncheck this box if you do not wish to display the title.
- **Font:** Use this drop-down menu to select the font you wish to use.
- **Colour:** Use this colour selection window to set the colour of the font.
- **Background Colour:** Use this colour selection window to set the background colour of the font.

4. Under the **Content Properties** heading, you may adjust the appearance of the content and select which information to display.

- **Content Background Colour:** Set the background colour of your content.
- **Font:** Use this drop down to select the font you wish to use for your content text.
- **Colour:** Use this colour selection window to set the colour of the content text.

5. If you wish to get a sneak peek of your formatting changes, refer to the **Preview** window on the right side of the screen. To see updates, click the **Refresh** button.

**Note:** The Preview button displays placeholder content that reflects your style changes, and not the actual content of your widget.
