ClubRunner

How to find a location's latitude & longitude in Google Maps

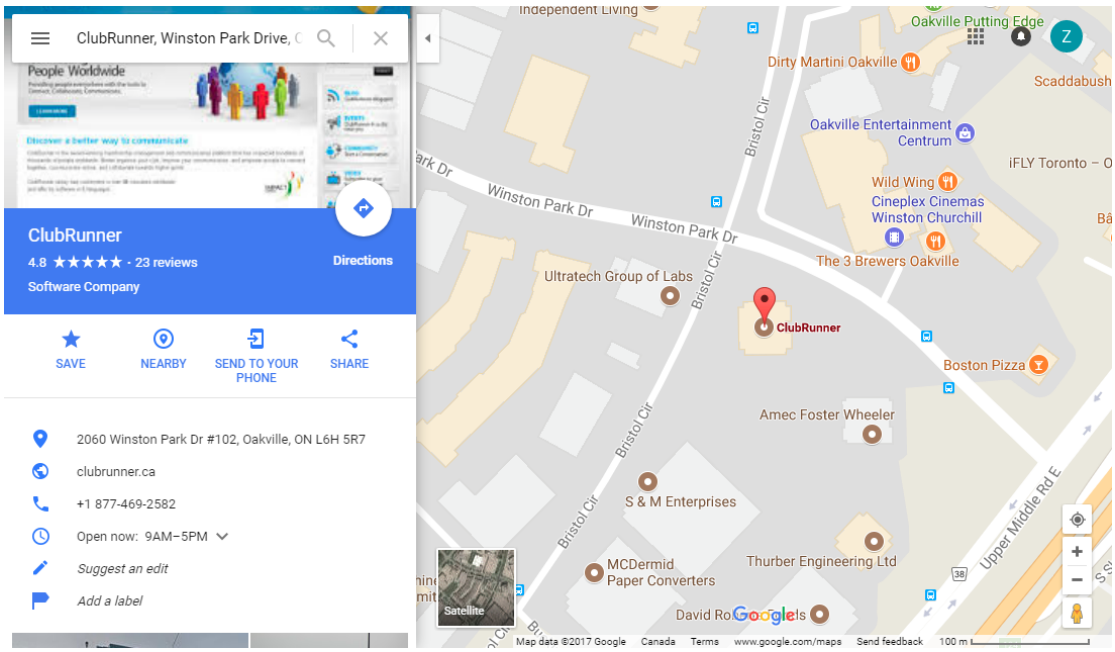

Omar S. - 2021-01-28 - Website Settings

Some areas in ClubRunner offer the ability to specify a Latitude & Longitude in the decimal degrees format to override or allow a map's point in pages like Events, Calendar Items, Club Information, etc. This guide will help you get the correct coordinates.

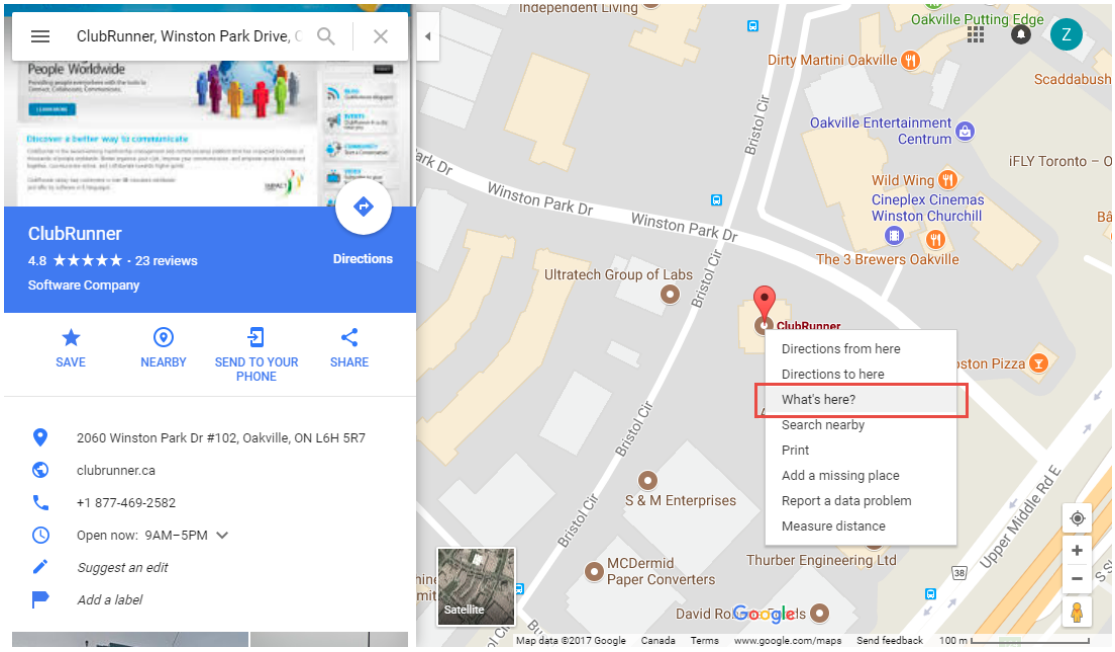

1. Navigate to Google's Maps website: www.google.com/maps

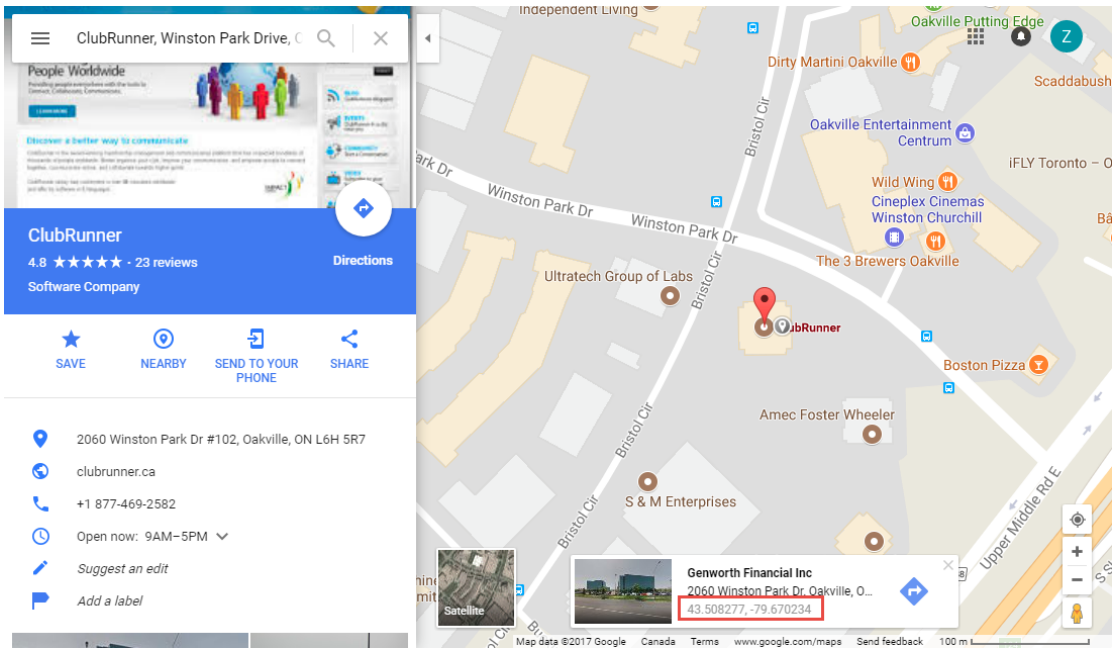

2. Enter the address you want to find the Latitude & Longitude for such as **ClubRunner**

3. Right click on the Map's pin point, and from the new menu choose **What's Here?**

4. A box at the bottom of the page will appear with the decimal degrees coordinates that are required for ClubRunner. **Latitude** is the first value, and **Longitude** is the second value.
