Placing widgets

Zach W. - 2021-03-23 - Website Widgets

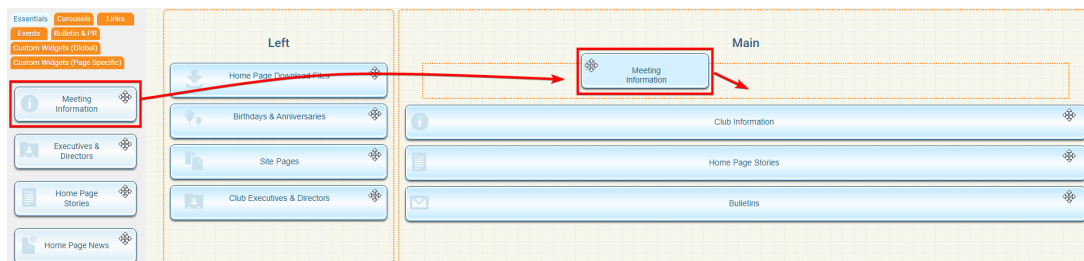

With all widgets an icon representing four arrows will appear to the right side of the widget button. This icon is the tool used to move the widget to the desired location on the page layout.

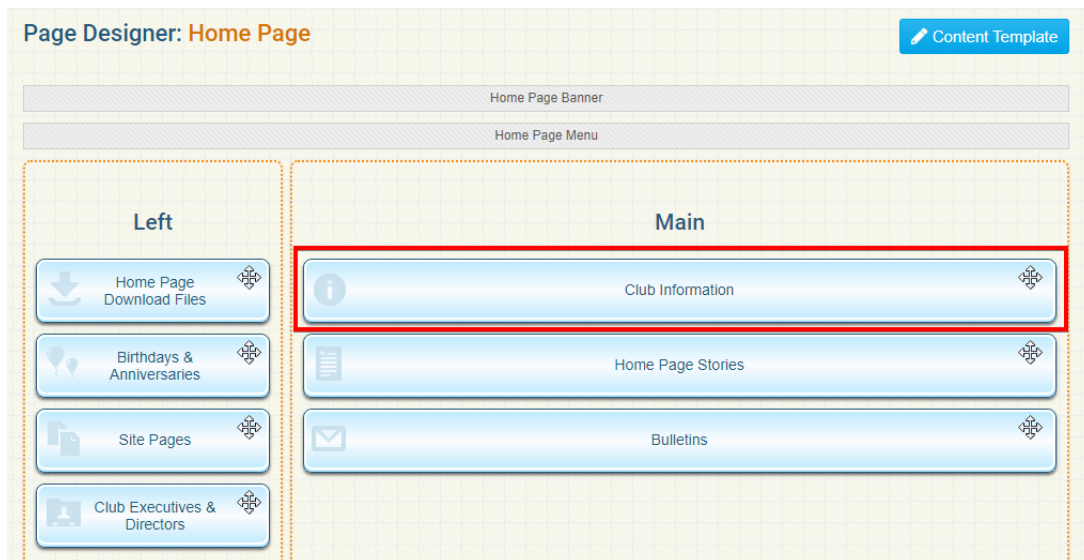

1. Left click and hold on a widget that you would like to use on the site.

2. Now drag the widget to the desired location on the page layout.

3. Now release the left click and watch the widget drop in and resize automatically.
